QuNeome Quickstart Guide

(QuNeo-monome) Bridge

QuNeo Version 1.2.1
February 2013

The QuNeo to monome bridge (QuNeome) is an application that converts QuNeo's MIDI messages into data that can be used by most applications that were made for the monome.

QuNeome comes in the QuNeo Software Installer. When running the QuNeo installer, if on Mac, make sure "Monome Bridge" is checked when prompted with the window on the right during the installation.

The application will be installed to the QuNeo directory's "Software Templates/Monome Bridge 1.0/" folder.

To use the Application:

1   Connect the QuNeo to your computer.
2   Launch the QuNeome application and the monome software you intend to use it with.
3   On your QuNeo select factory Preset 5.
4   In QuNeome's "DEVICE" menu, make sure "QUNEO" is selected (or "USB Audio Device" for Windows XP users).
5   You may need to change the "PREFIX" (at the very bottom) if the monome software you are using requires a different prefix.

For more information visit the monome website: http://monome.org/data/app/monomeserial
