This readme document is for use with the Manual QuNeo Software Installer. The manual installer will not automatically install software template files to locations outside of the QuNeo directory. This requires users to place these files into the correct directories themselves.

Reason Template Installation File Locations:

Mac:
Go to your QuNeo installation directory and within that, go to "Software Templates/Reason 1.0/Installation Files". There will be a "RemoteMap" and a "RemoteCodec" folder. Follow these steps to manually place these to the correct locations:
1. First go into the "RemoteMap" folder.
2. Copy the folder "KMI" and paste it to the following directory: "/Library/Application Support/Propellerhead Software/Remote/Codecs/Lua Codecs/"
3. Next go back to the "RemoteCodec" folder to copy the "KMI" folder and paste it into the following directory: "/Library/Application Support/Propellerhead Software/Remote/Maps/"
4. Now you can open up Reason and select the MIDI mapping script. Use the Reason Quickstart for more instructions on using the QuNeo Reason Template.

Windows:
Go to your QuNeo installation directory and within that, go to "Software Templates/Reason 1.0/Installation Files". There will be a "RemoteMap" and a "RemoteCodec" folder. Follow these steps to manually place these to the correct locations:
1. First go into the "RemoteMap" folder.
2. Copy the folder "KMI" and paste it into the following directory:
   a. On **Windows XP**: "C:/Documents and settings/All Users/Application Data/Propellerhead Software/Remote/Maps/"
   b. On **Windows 7**: "C:/ProgramData/Propellerhead Software/Remote/Maps/"
3. Next go back to the "RemoteCodec" folder to copy the "KMI" folder and paste it into the following directory:
   a. On **Windows XP**: "C:/Documents and settings/All Users/Application Data/Propellerhead Software/Remote/Codecs/Lua Codecs/"
   b. On **Windows 7**: "C:/ProgramData/Propellerhead Software/Remote/Codecs/Lua Codecs/"
4. Now you can open up Reason and select the MIDI mapping script. Use the Reason Quickstart for more instructions on using the QuNeo Reason Template.

Note to Windows 7 users: The "ProgramData" folder is hidden. If you need to find it go to "Control Panel", then to "Appearance and Personalization". Find "Folder Options" and click on where it says "Show hidden files and folders". A window will pop up. Under the "Hidden files and folders" label, click "Show hidden files, folders, and drives". Now press apply and you should be able to find the "Program Data" folder. After copying the installation files into their proper locations you go back to Folder Options and click "Don't show hidden files, folders, or drives".
